The simple Python robot simulator 2D is a 2D free-robot simulation program that can be used to create and simulate a simple robot on a computer screen. The simple Python robot simulator 2D is available in two versions. One is free for any

---

person who wants to learn and play with it. The second version is for commercial use and can simulate one robot on a simple map. The simple Python robot simulator 2D is easy to use. It consists of a 3D panel and a 2D panel. The 3D panel can show the world in 3D. The 2D panel shows the real world in 2D. All movements and actions in the 2D panel can be captured by the robot. All robot actions and events can be controlled by actions in the 2D panel. Features

of simple Python robot simulator  
2D: Easier to control. Simulate  
one robot on a simple map. Free  
for any person who wants to  
learn and play with it. Designed  
with a lot of default values.  
Available in two versions.  
Advantages: Very easy to use.  
Safe for use. Works with  
Android, iOS, Windows and  
MAC OS. How to use simple  
Python robot simulator 2D: 1.  
Download the simple Python  
robot simulator 2D file from the  
web.2. Run the simple Python

---

robot simulator 2D file.

2. Download and install Simple Python Robot Simulator 2D on the computer you want to use. 4. After installing the Simple Python Robot Simulator 2D program, press **START** to launch the program and simulate a robot. The software uses 2D (2-Dimensional) drawing to display real world in a 2D panel. A robot on the screen can move left, right, up and down, or even rotate. In addition, the robot can be controlled with the mouse and

---

can be loaded and saved. Simply by launching the program and press **START** you will see the robot in real time. Press the middle button of mouse to control the robot. After a short time, when the robot is a little older, your Cd can stop moving (it doesn't fall off, but can't move), press the start button, you can save a drawing (folder) and/or change the color of the robot. Tips for using Simple Python Robot Simulator 2D:  
Note: The robots simulated by
